Summary

I am a dedicated database developer with a strong foundation in ETL processes and SQL Server, specializing in optimizing data integration workflows. My past experiences have honed my skills in designing efficient ETL solutions and migrating legacy systems. I am adaptable, self-motivated, and continuously seeking to enhance my knowledge in SSIS and related technologies to drive seamless data operations.

Employment History

Senior Data Engineer

Manuh Solutions

Nov 2020 - Jun 2023

- Developed ETL pipelines using SQL Server, Pentaho, and Informatica, ensuring 99.9% data accuracy and reducing migration time by 25%.
- Migrated large-scale legacy healthcare data from source to destination databases through complex transformation logic, ensuring data integrity, consistency, and compliance with data governance standards.
- Conducted SQL code reviews, reducing data-related issues by 20% pre-deployment.
- Implemented automated data ingestion and transformation using Python scripting and optimized PostgreSQL management, increasing data pipeline efficiency by 15%.
- Optimized SQL queries using indexing and advanced DML/DDL commands, improving query execution speed by 30%.

Automated Airline Stock Data Pipeline

Personal project

- Built a fully serverless data pipeline using AWS Lambda to process airline stock data points.
- Automated pipeline execution via EventBridge, reducing manual intervention.
- Integrated yfinance and pandas through Lambda Layers for data formatting.
- Stored CSV files in Amazon S3 for scalable ML and BI integration.

Kafka Stock Market Data Pipeline - Real-Time Data Streaming & ETL

Personal project

- Designed a real-time data pipeline using Apache Kafka and AWS.
- Developed Python-based Kafka Producer & Consumer for data streaming.
- Optimized data workflows for high-volume streaming data, improving query performance by 40%.

Netflix Data Visualization with Amazon Quick Sight

Personal project

- Created data visualizations to provide insights into content distribution.
- Designed real-time data filtering & customized dashboard views.
- Configured S3 permissions & optimized data workflows for integration.

Data Intern

BEL-Bharat Electronics Limited

Feb 2020 - Mar 2020

- Built an ETL pipeline using Python and MySQL, reducing energy consumption in ship systems by 20%.
- Implemented predictive analysis tools to manage system overheating.

Data Intern

Bosch Ltd

Jul 2019 - Aug 2019

- Developed a real-time data integration system for manufacturing, reducing downtime by 25%.
- Created Tableau dashboards for predictive maintenance, reducing costs by 15%.

Education

Master's Degree in Data Analytics Engineering, George Mason University (August 2023 - May 2025)

Skills

- | | | | |
|------------------|---------------------|------------------|-------|
| • SQL Server | • Data Integration | • Error Handling | • Git |
| • SSIS | • Data Modeling | • Informatica | |
| • ETL Processes | • SQL Optimization | • Python | |
| • Data Migration | • Stored Procedures | • AWS | |
